Chapter 1 - Mfc42 dll

2

1 - Mfc42 dll

Ever get that annoying message whenever you try to open MS Paint? You know, the one that says: MS Paint caused an error in the mfc42.dll? It took me forever to find a cure to that... bless google. Here's the fix:

Go to the MS-DOS prompt and type: **cd system**. Then type **regedit**. This takes you to your computer's registry. For the case of MSpaint blues (yes I know it's sad oekaki artists, but bear with me for a moment).

Follow this path:

HKEY_CURRENT_USER

Software

Microsoft

Windows

Current Version

Applets

Paint

Delete that folder once you click on it. No second thoughts, just BLAM it. Close the registry and MS-DOS. Now you can go back to drawing Oekaki (that is if you like to use MS Paint)!

Tell me how it works for you!
