That smell means moisture is trapped somewhere deep in the seals or vent area. A good clean helps, but if the vent fan or drain line is clogged, mold keeps returning. I'd suggest having a pro check it properly. Major Appliance Repair <https://majorappliancerepair.info/> does fast in-home appliance repair, and they're great with dishwashers.

That smell means moisture is trapped somewhere deep in the seals or vent area. A good clean helps, but if the vent fan or drain line is clogged, mold keeps returning. I'd suggest having a pro check it properly. Major Appliance Repair <https://majorappliancerepair.info/> does fast in-home appliance repair, and they're great with dishwashers. Their technicians clean and disinfect the internal drainage system — something most people can't reach safely. They can also replace rubber seals if they're too worn to dry out completely. Once those areas are clear, the smell disappears and won't come back. They service homes across Seattle and Bellevue, so getting help is quick. A professional deep clean once a year keeps mold away and your dishes spotless.
